

Objective:

The game is to control the dinosaur (representing the player) to jump over obstacles, collect coins to score 2 points each, and collect sunflowers to speed up. The game continues until the player collides with an obstacle.

Controls:

Press the Spacebar to make the dinosaur jump over the obstacle. Press more, jump higher (i.e. press two will make a double jump).

Play:

When you start the game, the dinosaur is positioned at the left side of the ground of the window near the bottom.

Obstacles (blue rectangles) will appear from the right side of the ground of the window and move towards the left.

Coins and sunflowers will appear from the right upwards of the window and move towards the left as well.

Use the spacebar to make the dinosaur jump over obstacles.

Try to collect coins by letting the dinosaur collide with them.

Every coin collected adds 2 points to your score.

The game speed increases when collecting the sunflowers, with scores added by 2 each second.

If the dinosaur collides with an obstacle, the game ends.

Score:

You earn 2 points for each coin collected.

Over time, the score will increase.

Add 2 points each second once the dinosaur collects a sunflower.

Game Over:

The game ends when the dinosaur collides with an obstacle.

A message will be displayed on the JFrame, showing your current score and the highest score.

If your current score is higher than the current highest score, a new high score message will replace the previous one.

Restart:

You have the option to play again by clicking "Yes" when prompted after the game ends.

If you choose not to play again, you can close the game window, and exit the program.
